

GUIDE #4: Taking Snapshot of VMs Using Ezstackr Cloud

Introduction:

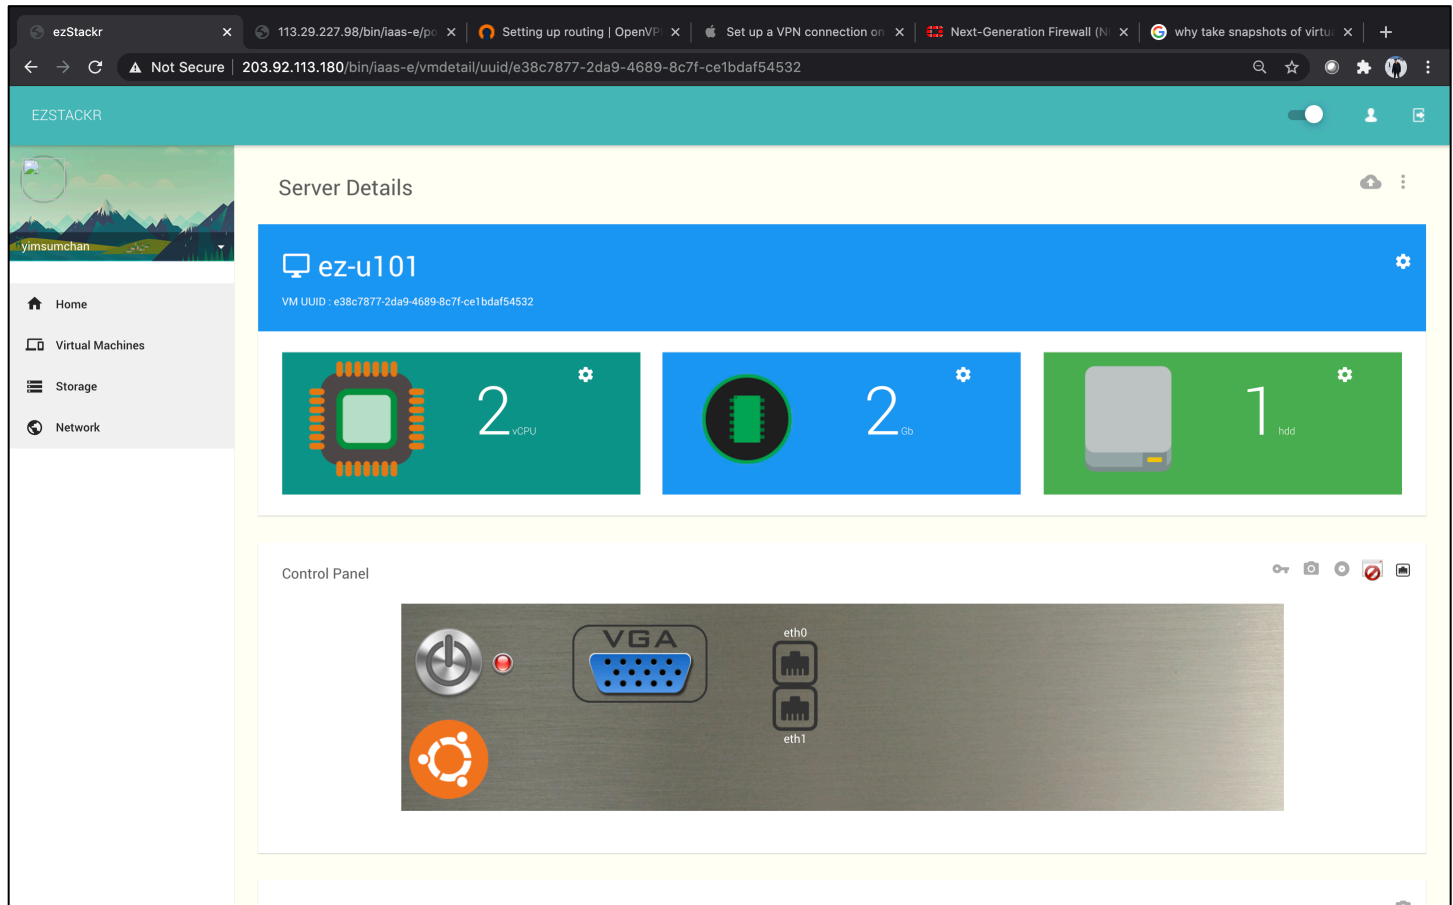

VM snapshots preserves the state and data of a virtual machine at a specific point in time. The state includes the virtual machine's power state (for example, powered-on, powered-off, suspended). The data includes all of the files that make up the virtual machine. Snapshots are also very useful for development purposes.

CREATING VM SNAPSHOTS

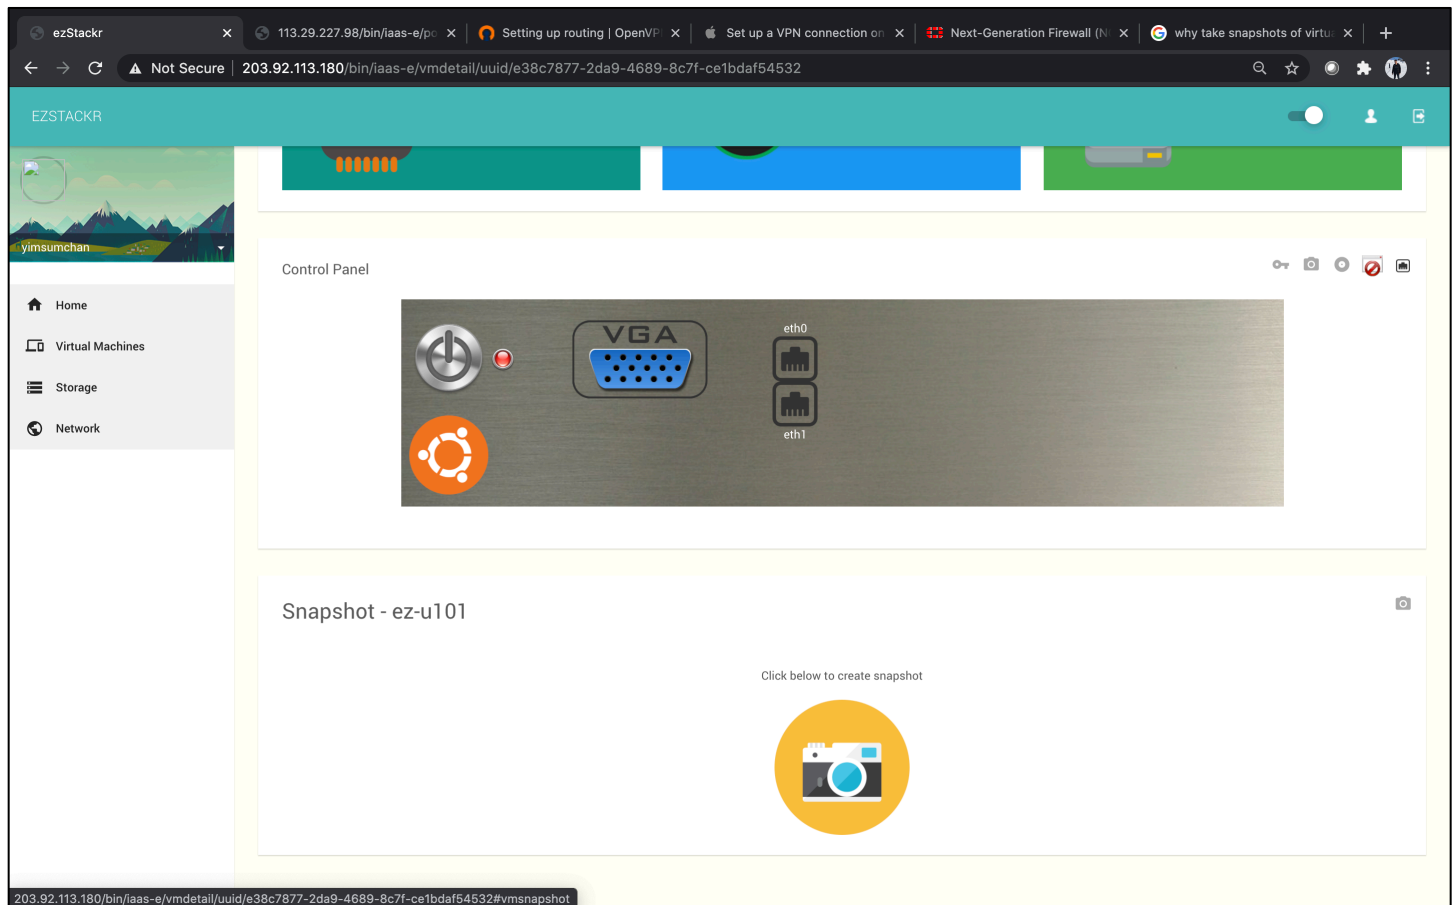

As User: Select “Virtual Machines”

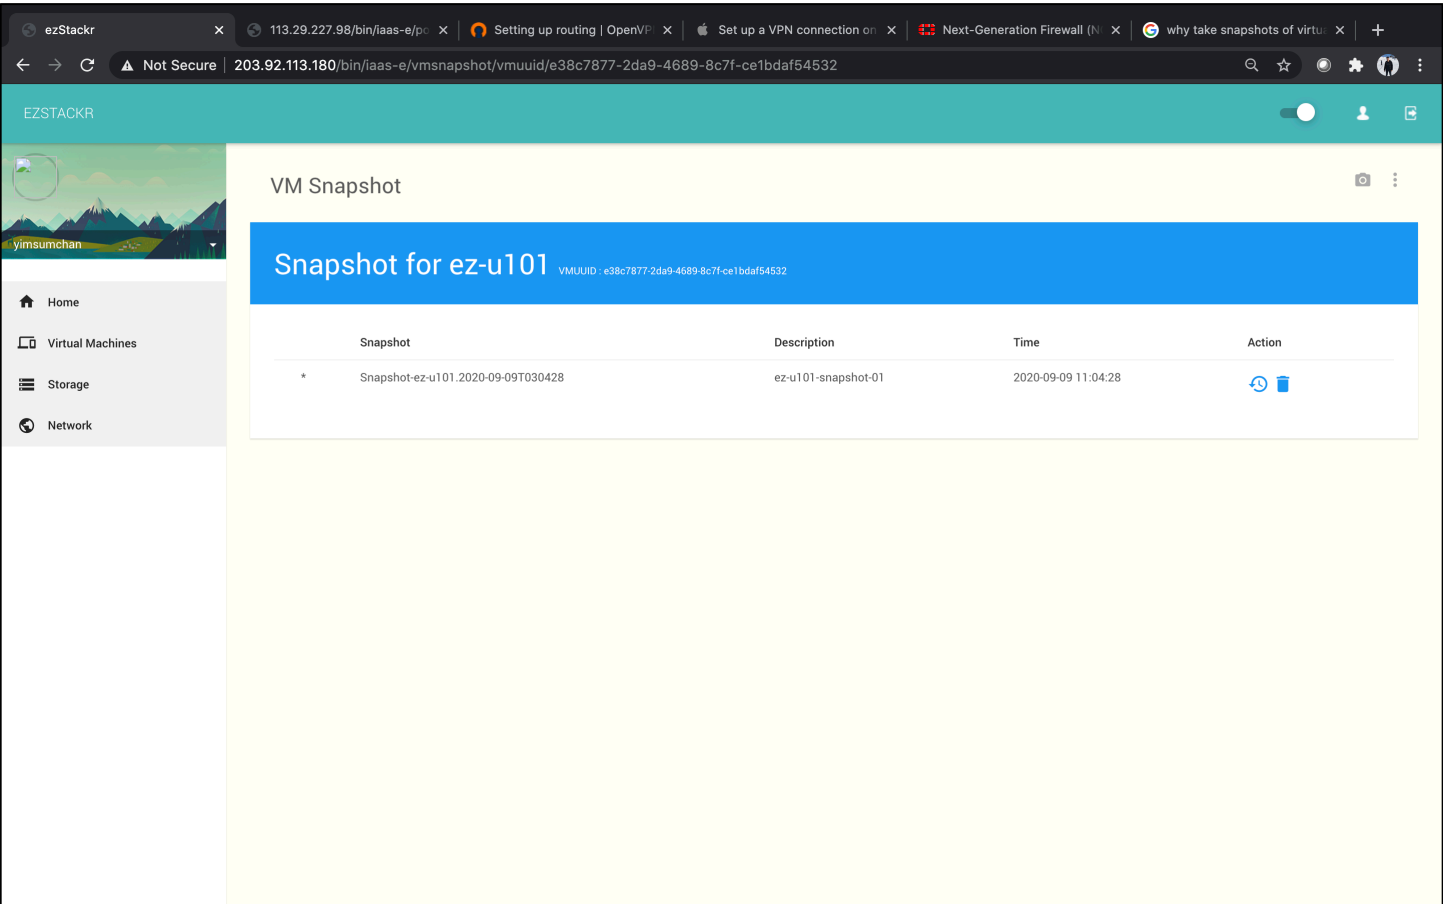

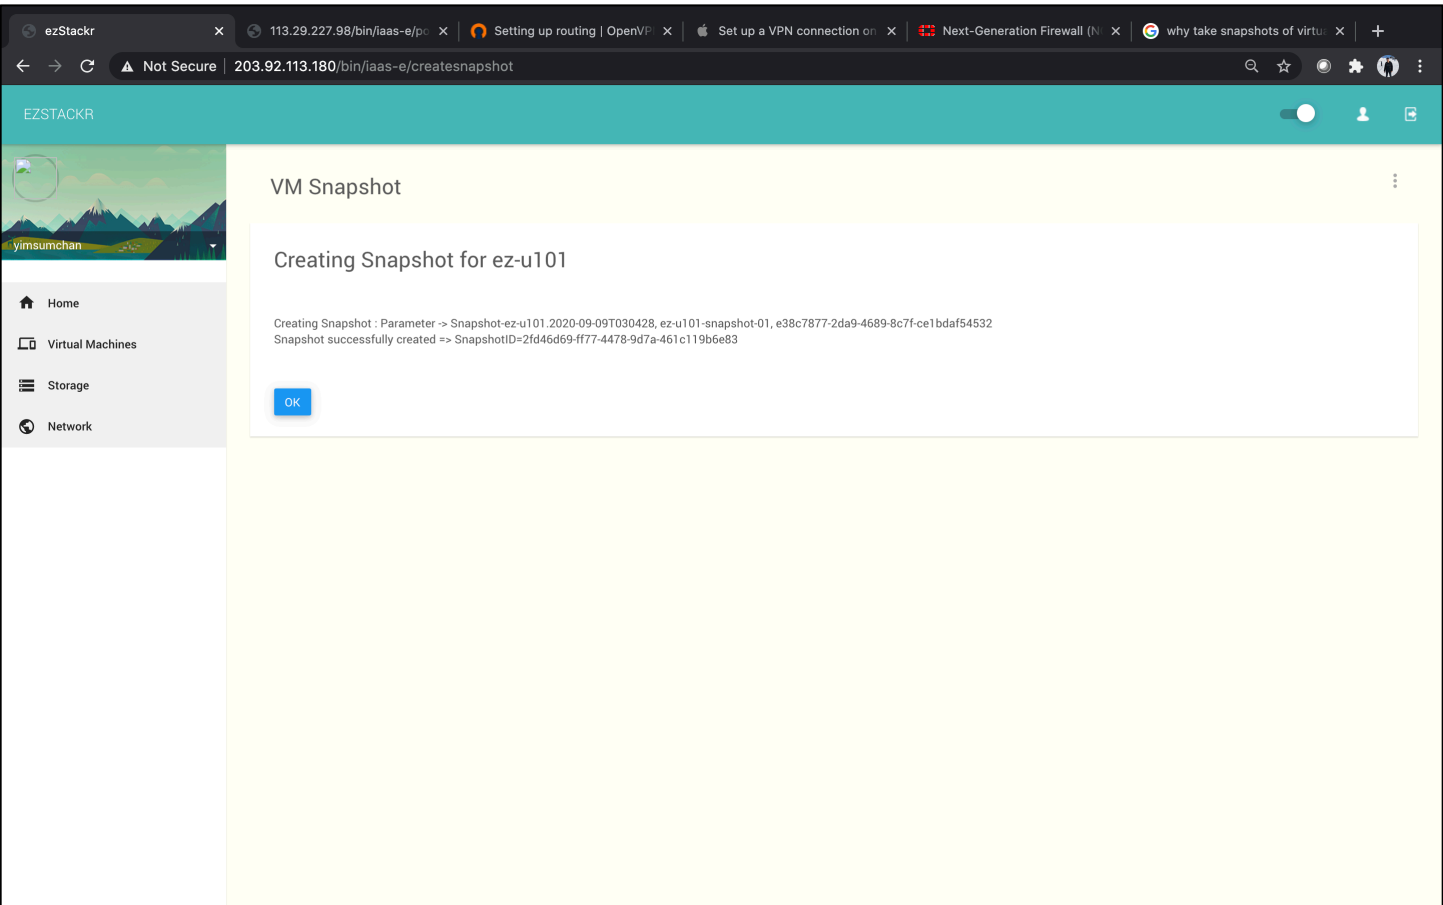

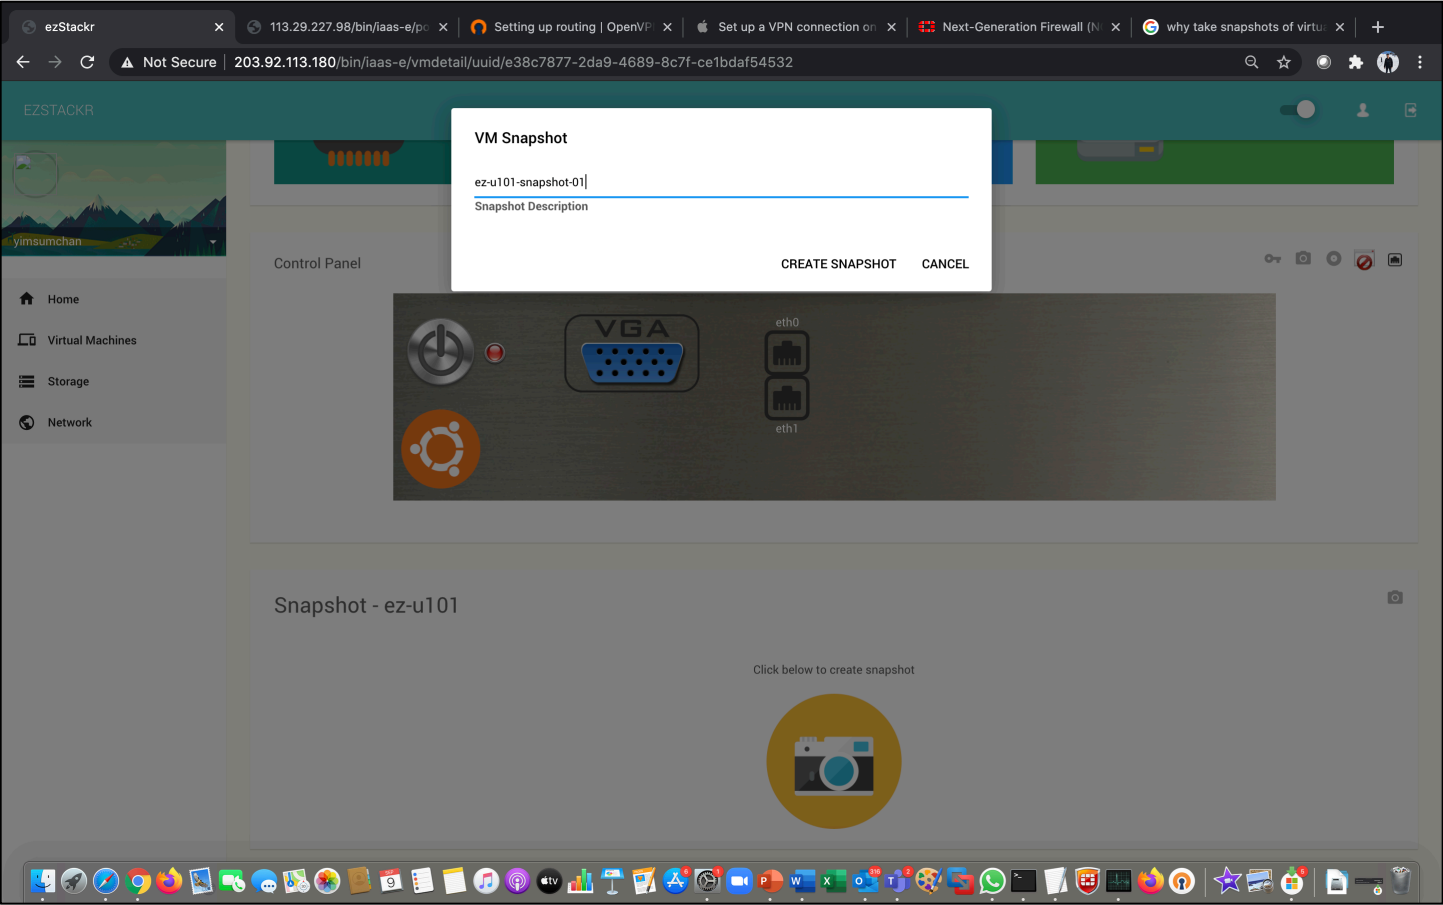

As User: Select a VM

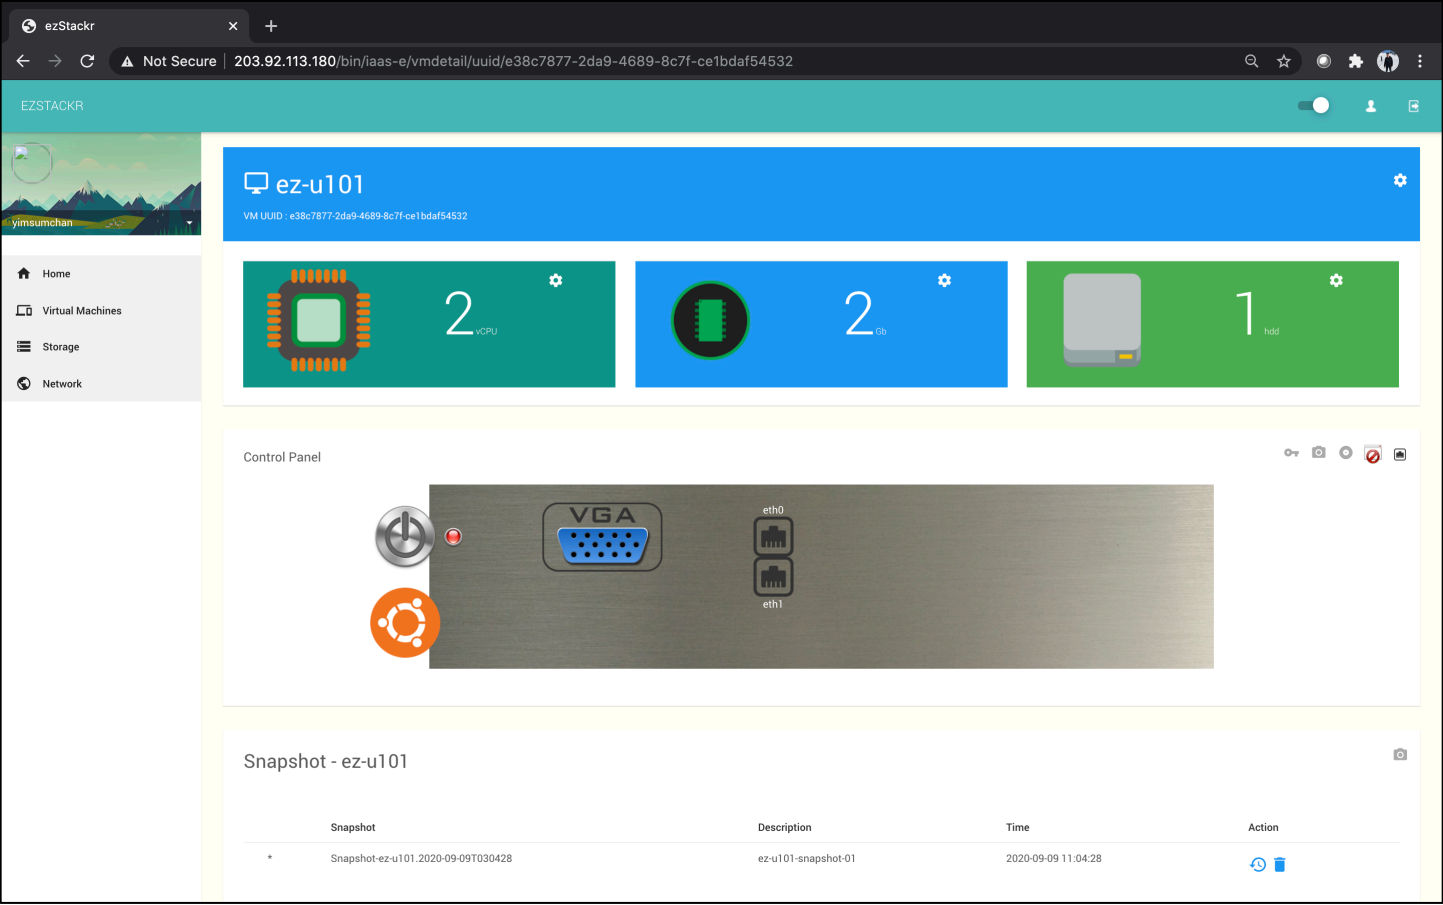

As User: Scroll to below and select the camera

As User: Describe the snapshot

As User: View a list of snapshots of your VM, scroll to bottom of page
